

Application

Height safety equipment is not only essential for preventing operator falls, but also for preventing tools from falling and causing serious injury.. The pouch is an accessory that attaches to the harness belt in order to transport tools. It allows the wearer to move around with hands free. Its construction of high-resistance synthetic fabric ensures product durability, while the leather membrane reinforcing the pouch base considerably reduces the risk of it being cut or pierced by tools. The two bolt-snap connectors enable speedy anchoring and optimal positioning of the pouch on the wearer's belt. They prevent the pouch from tipping up when the operator assumes precarious positions

tool holding pouch

Feature:

- Temperature range - 30°C à + 60°C.
- Material: polyester
- Max. weight 20 kg

Description

This polyester cloth pouch for carrying tools has been designed to be attached to Tractel® harness belts. Its size enables the wearer to carry the tools or small components necessary for work s/he is required to perform at height.

The pouch consists of three compartments:

- A main, open compartment measuring 220mm wide x 70mm deep x 350mm high. The base of the pouch is leather-reinforced to prevent it being cut or pierced by sharp tools.
- A velcro-closable pocket measuring 220mm wide x 20mm deep x 180mm high.
- Two front pockets measuring 110mm wide x 20mm deep x 180mm high.
