

APPLICATION

The Tiroke rescue hoist is a rope hoist with unlimited stroke. It is small, foldable, and lightweight. It can be installed anywhere very quickly on its braided rope. Its versatility means it can lift a 120 kg load or perform a rescue operation on an operator. The back-and-forth movement of the lever multiplies the pulling force so that the weight at the end of the braided rope can be lifted efficiently and effortlessly.

TECHNICAL SPECIFICATIONS

The Tiroke hoist is a compact traction and lifting device. It is easy to use and simple to operate, enabling an operator to be evacuated or a load to be moved up and down in emergency situations where conventional lifting equipment is unavailable or unusable.

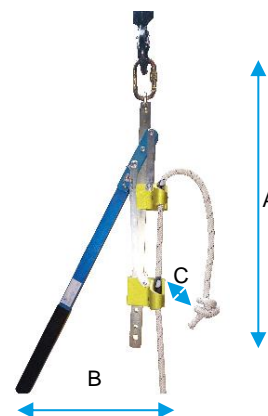

The Tiroke hoist is an independent braided rope hoist that can be positioned anywhere on the rope and can automatically take up the load applied by an operator, or a load suspended on the rope at any time.

The Tiroke hoist must be used exclusively with the 13 mm braided rope for Tiroke hoist, the condition of which must have been checked.

As the 13 mm braided rope for Tiroke hoist is not stored, the load lifting height is almost unlimited and only depends on the length of the rope.

However, for normative reasons, the Tiroke hoist has been tested in the laboratory with a length of 50 m for rescue operations.

The Tiroke hoist is equipped with an overload pin to protect the braided rope. This overload pin breaks at a pressure of 40 daN on the operating lever.

STANDARDS

The Tiroke hoist complies with standard EN 1496

EN 1496-A

Lifting rescue hoist for a 120 kg load

EN 1891-A

Braided rope of 13 mm

Directive 2006/42/CE

Lifting hoist compliant with the machine directive

PRODUCTS CODES

Code	Description	Weight (kg)	Dimensions (A-B-C in mm)
299029	Tiroke	4.2	600 X 150 X 100
087572	RLX A13.0 Tiroke hoist 10 M-M15-A	1.3	Ø 300 X 100
087582	RLX A13.0 Tiroke hoist 20 M-M15-A	2.4	Ø 350 X 100
