The ascent/descent system is a manually operated rescue and positioning system. Designed for raising and lowering personnel or equipment, it can be used in rescue situations as well as in industrial work access. The system is also ideal for confined space applications.

The main feature of the system is the special design of the double pulleys. The sheave of the pulleys has a built-in antireversing lock that activates when the system is used in descent mode. This locking action results in added friction that contributes substantially to reduce the effort and increase the control during the lowering operation. The system requires only 10 lbs. (4.5 kg) of effort to hold a 220 lb. (100 kg) load.

For further safety, the ascent/descent system comprises a right-hand ascender (left-hand also available) attached to both the operating rope and the user via a kernmantle retainer. The ascender will automatically stop the descent if the operating rope is accidentally released.

The ascent/descent system offers the ability to work solo, operator assisted or operator assisted rescue tasks. Providing a mechanical advantage of 4:1, it allows the operator to lower and raise load with ease and efficiency.

The system is offered with two types of ropes. It is available standard with 7/16-in. (11 mm) diameter kernmantle rope or can be supplied, on request, with 1/2-in. (13 mm) diameter kernmantle rope for special applications requiring a higher strength.

For further information, refer to "Use and Maintenance Instructions" for the ascent/descent system.

⚠️ WARNING
Always select an anchorage point that is capable of supporting 5,000 lbs. (22.2 kN).

⚠️ WARNING
Ascent/descent system must be used in conjunction with a complete fall protection system.

Features
- Reverse-locking double pulleys
- Right hand high strength ascender with retainer (left hand available)
- Autolocking carabiners (3x)
- 7/16-in. or 1/2-in. (11 mm or 13 mm) kernmantle rope
- Anchor attachment sling
- Carrying and storage bag

Applications
- Rescue operations
- Work positioning
- Confined space
Reverse-locking pulleys – K5SP3
- 4-in. (100 mm) double pulleys with antireverse sheaves
- High-grade anodized aluminum
- Weight: 1.8 lbs. (840 g)
- Strength: 10,000 lbs. (44.5 kN)

Right hand ascender – K3020492
(optional left-hand – K3020502)
- High-grade cast aluminum with stainless steel cam assembly
- Weight: 24 oz. (660 g), including retainer
- Strength: sheath damage to rope results at 2,500 lbs. (11 kN)

Autolocking carabiner (⅜ in. [11 mm] system) – P773
- Carbon steel
- Minimum breaking strength: 10,000 lbs. (45 kN)
- Gate opening: 1 in. (25 mm)
- Weight: 9.3 oz. (265 g)

Kernmantle rope ⅜ in. (11 mm) – K51538
- Construction: polyester outside, nylon inside
- Weight: 6.5 lbs./100 ft. (9.7 kg/100 m)
- Strength: 7,800 lbs. (35 kN)

Kernmantle rope ½ in. (13 mm) – K51512
- Construction: polyester outside, nylon inside
- Meets or exceeds 1983 NFPA standard
- Weight: 8.2 lbs./100 ft. (12.2 kg/100 m)
- Strength: 10,000 lbs. (44.5 kN)

Carrying and storage bag:
- Medium waterproof carrying and storage bag, 23 x 14 x 4 in. (58 x 35 x 10 cm) – XB23144
- Large waterproof carrying and storage bag, 26 x 16 x 8 in. (66 x 40 x 20 cm) – XB26168

Drawings are for illustrative purposes only.
