

XVEST02

Combining comfort, flexibility, high visibility and fall protection, Tractel's Tracvest is the ideal choice for job management personnel or foremen whose job doesn't require full time fall protection and for workers requiring extra visibility while performing their job at heights.

The Tracvest is a lightweight high visibility vest featuring back and side D-ring openings for wearing with an harness. The harness is integrated into the vest, between the inner and the outer shell. The built-in liner and outer shell offer easy snap entry accommodating complete removal of the harness, facilitating inspection and/or replacement. Once the harness has been adequately adjusted to the user's size, all it requires is to slip the vest on and connect the leg and chest straps. When fall protection is not required, the harness leg straps can be folded inside the vest for more freedom of movement.
