

APPLICATIONS

The P.A.S 150 kg anchors are intended to have a personal fall protection system - for example a cable with a blocfor™ fall prevention device - attached to them.

TECHNICAL CHARACTERISTICS

This anchor point PPE is tested to stop the fall of a weight of 150 kg, encompassing the weight of a person equipped with their tools.

In this case the P.A.S 150 kg anchors satisfy standard EN795 type A: 2012, anchor device.

They provide an anchor point on a sufficiently resistant structure (> 12 kN). it is intended to secure a single operator.

DESCRIPTION

- P.A.S 150 kg anchors are made of Stainless Steel 316L
- Weight : 62g
- May be fixed to the host structure using one 12 mm anchor bolt, chemical or mechanical.
- May be screwed to the structure mechanically using 12 mm bolt

- The P.A.S anchor is delivered with a traceability label which permits to identify the device and to make an annual control

- **DIMENSIONS :**

Dimensions (L*H*ep in mm)

35x56x45
