Temporary Suspended Access

for the Global Energy Market

Tractel Secalt S.A. - Solutions for your Maintenance Applications

Our Skills to your Advantage

Maximise your duty cycle !

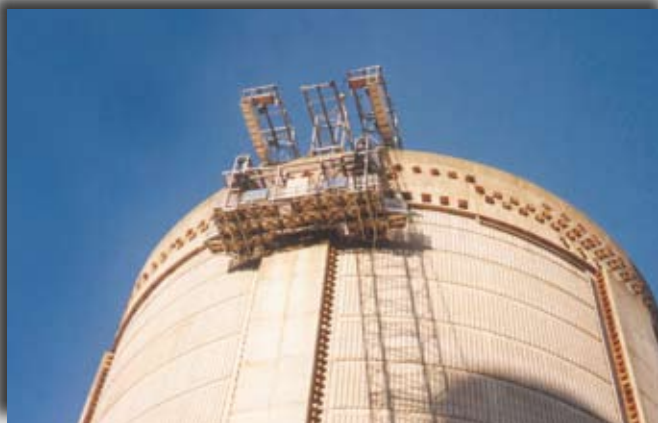

Producing Energy requires 100 % reliable installations, whatever the energy source (nuclear, coal, gas, petrol, water, wind, ...) failures in power stations incur huge costs. The key to reliable installations is **preventive maintenance**.

Tractel Secalt™ has acquired an excellent reputation as a trustworthy partner of energy producers. Tractel Secalt access equipment can be installed promptly to lift your maintenance team to any work area at height. It offers ergonomic work positioning during refurbishment, painting, repairs and inspection of vertical or inclined surfaces, inside or outside walls of cooling towers or tanks, chimneys, boilers, etc.

Experience the quick and easy assembly of Tractel Secalt equipment.

Fossile Energy

Nuclear Energy

Top Technology at Height - in Safety !

Special work environment requires special equipment.

Thanks to its modularity and versatility Tractel Secalt standard suspended platforms and cradles meet requirements of numerous applications.

In case of very particular applications - highly skilled and experienced Tractel Secalt engineers will make accessible even the most inaccessible areas.

Challenge us to provide a solution for tricky access applications. Decades of experience have generated access solutions for areas with an explosive atmosphere using our renowned TIRAK™ air-driven hoist range.

Renewable Energy
